Wanted: graduate student. Must be interested in traveling to the Arctic and battling against the ice caps and the information scientists' belief that the measurement of the ice caps will prevent a catastrophe.

For a graduate school? One of the University of Kansas, need CReSIS is ready the opportunities of a life www.cresis.ku.edu/

Available: Teacher. Please feel they have a calling to understand about the ice caps

Graduate students from CReSIS awarded for nobility

Center for Remote Sensing of Ice Sheets also known as CReSIS brings professionals and students together. They have places for a variety of majors. Graduate students in partner institutions will examine a broad range of scientific and technical topics related to climate change research by taking three courses outside their area of specialization. Distance-learning formats will be used to make all courses available to those at partner institutions. Students from outside the host institution will enroll in a directed reading or research course offered by one of their own faculty members in order to get credit for the outside courses.
